

1 – In Chrome, go to **Settings** (three dots icon)

2 - go to **Privacy and security > Site Settings**

3 - Click **Cookies and site data**.

4. Make sure you :Allow all cookies

The image shows the Chrome Settings interface. On the left is a sidebar with categories: 'You and Google', 'Autofill', 'Safety check', 'Privacy and security', 'Appearance', 'Search engine', 'Default browser', 'On startup', 'Advanced', 'Extensions', and 'About Chrome'. The main content area is titled 'Cookies and other site data'. At the top of this page is a search bar and a back arrow. Below the title is a decorative illustration of various cookies. Under the heading 'General settings', the option 'Allow all cookies' is selected and highlighted with a red rectangular box. Below this, there are two explanatory paragraphs: 'Sites can use cookies to improve your browsing experience, for example, to keep you signed in or to remember items in your shopping cart' and 'Sites can use cookies to see your browsing activity across different sites, for example, to personalize ads'. Further down, there are three radio button options: 'Block third-party cookies in Incognito', 'Block third-party cookies', and 'Block all cookies (not recommended)'. At the bottom, there are two toggle switches: 'Clear cookies and site data when you quit Chrome' (which is turned on) and 'Send a "Do Not Track" request with your browsing traffic' (which is turned off).
